

Sea Delight has been a proud member of GDST since its formation and has worked closely with the GDST team and other members on this project. After years of work the GDST V.1 is complete and ready for adoption. The new standard establishes a list of Key Data Elements (KDEs) for traceability with standardized notation and clear definitions.

“The GDST Standards and Guidelines Version 1.0 presents a common denominator for traceability systems worldwide. We welcome the opportunity to adopt GDST1.0 and continue to expand our use of it,” said Cesar Bencosme, Vice President of Sea Delight, the industry leader for food safety and quality.

Sea Delight has been working on electronic solutions in collecting “upstream” traceability data to improve fishery and aquaculture management since 2012 and is looking forward to expanding this work in coordination with GDST 1.0. Sea Delight and GDST share the same vision, traceable and sustainable sources of seafood for now and for our future. A vision inspired by the people in the fishing communities where we work and live.
